

Santiago Acosta

Data Analyst · Python · SQL · Power BI · Open to Remote

Bogotá, Colombia · santiagoacostab17@gmail.com · [linkedin.com/in/santiagoacostab17](https://www.linkedin.com/in/santiagoacostab17) · santiagoacostab17.github.io

PROFILE

Data Analyst focused on turning complex data into clear business decisions. I build end-to-end pipelines — SQL data models, Python statistical analysis, and executive BI dashboards — to reduce risk, surface growth opportunities, and support strategic decisions. TripleTen certified. English B2. Available for remote international teams.

TECHNICAL SKILLS

Data Analysis	SQL · Python · pandas · NumPy · Excel
Statistics	SciPy · statsmodels · A/B Testing · Confidence Intervals · Regression
Business Intelligence	Power BI · DAX · Looker Studio · Tableau · Plotly
Data Modeling	MySQL · Star Schema · ETL Workflows · PostgreSQL · SQLAlchemy
Tools	Git · GitHub
Languages	Spanish (native) · English B2

PORTFOLIO PROJECTS

Northwind Revenue Insights MySQL · Power BI · Star Schema · DAX

github.com/santiagoacostab17/Northwind-Revenue-Insights

- Designed a MySQL star schema from raw transactional data; built Power BI dashboards with drill-through on revenue KPIs, product performance, and regional trends.
- Found that 3 products drive ~64% of \$13M in total revenue — a critical concentration risk. Recommended diversification strategy and a best-practices playbook based on top-performer behavior.

EURUSD Quantitative Pipeline Python · pandas · NumPy · Time Series · Statistical Analysis

github.com/santiagoacostab17

- Processed 81,938 1-minute EURUSD observations over 6 years; built a vectorized backtesting engine with confidence intervals, Kelly criterion, and edge validation.
- Identified a weak but statistically real microstructure signal (>50% bias across 81K+ independent observations). Concluded the pattern is a valid foundation for further research with session and volatility filters.

RappiPlus — End-to-End Business Analysis Python · PostgreSQL · Power BI · SciPy · Cohort Analysis · A/B Testing

github.com/santiagoacostab17

- Audited data quality, built a SQL conversion funnel, and ran cohort retention analysis on a subscription product.
- Pinpointed the highest-impact drop-off: Begin checkout → Add payment info loses 13% of users. Validated a checkout redesign via Z-test ($p < 0.05$). Flagged a tracking anomaly that was distorting funnel metrics.

WORK EXPERIENCE

Customer Operations Associate

Teleperformance & Concentrix · 2023–2024

- English-language operations supporting international clients. Professional written and verbal communication (B2). Process management and operational metrics tracking.

EDUCATION & CERTIFICATIONS

Data Analyst Certification	TripleTen	Completed 2026
Data Science Program	A2 Capacitación	In progress · 2026
Mechanical Engineering	Universidad de los Andes	2018–2022 · 7 semesters
