

Santiago Acosta

Data Analyst • Bogotá, Colombia | portfolio: <https://santiagoacostab17.github.io>
santiagoacostab17@gmail.com | [linkedin.com/in/santiagoacostab17](https://www.linkedin.com/in/santiagoacostab17)

PROFESSIONAL SUMMARY

Data Analyst with a strong foundation in SQL, Python, and Power BI, developed through intensive bootcamp training and multiple end-to-end analytical projects. Experienced in the full data workflow: collecting and cleaning data, writing SQL queries, performing statistical analysis, and delivering clear dashboards and reports for non-technical stakeholders. Collaborative, detail-oriented, and eager to contribute to a data-driven team.

TECHNICAL SKILLS

SQL	MySQL · PostgreSQL — queries, joins, subqueries, window functions, aggregations
Python	pandas · NumPy · SciPy · statsmodels — data cleaning, analysis, automation
Excel	Pivot tables · formulas (VLOOKUP, INDEX/MATCH) · charts · data validation
Visualization	Power BI (DAX, calculated columns, slicers) · Tableau
Analytics	A/B testing · cohort retention · funnel analysis · trend analysis · basic statistics
Other	Git / GitHub · Jupyter Notebook · data documentation & process write-up
Language	Spanish (native) · English B2 (professional)

PROJECTS

RappiPlus End-to-End Business Analysis | Portfolio Project 2026

- Collected and cleaned a 10,000+ row dataset, documenting data quality issues (nulls, duplicates, type mismatches) before analysis.
- Wrote PostgreSQL queries to build a multi-stage conversion funnel, identifying drop-off points across the subscription flow.
- Ran cohort retention analysis to track subscriber behavior month over month across different acquisition periods.
- Conducted A/B test (Z-test, $p < 0.05$) to compare plan performance and delivered a statistically grounded business recommendation.
- Built a Power BI executive dashboard with KPIs, slicers, and drill-down views; documented all metrics and DAX measures for handoff.

Northwind Revenue Insights | Portfolio Project 2026

- Queried a relational MySQL database to extract and analyze sales trends, customer segments, and product performance.
- Created pivot-table summaries and an interactive Power BI report with YoY and MoM DAX measures for business review.
- Documented data definitions, query logic, and dashboard methodology in a structured README for reproducibility.

EURUSD Quantitative Pipeline | Portfolio Project 2024–2025

- Built an automated Python pipeline (pandas, NumPy) to ingest, clean, and process 81,900+ rows of financial time-series data.
- Applied statistical hypothesis testing to validate signal significance; version-controlled all code on GitHub with documented methodology.
- Reduced manual data processing steps through scripted automation, enabling faster iteration on analysis.

EDUCATION & TRAINING

Data Science Program | A2 Capacitación

2025 – Present

Statistical modeling, machine learning fundamentals, ETL concepts, and data pipeline design.

Data Analyst Bootcamp | TripleTen

2025 – 2026

Full-stack analytics training: SQL, Python, Power BI, A/B testing, cohort analysis, and business case reporting. 10+ applied projects across retail, e-commerce, and service sectors.

Mechanical Engineering (7 semesters) | Universidad de los Andes — Bogotá

2018 - 2023

Quantitative foundation in applied mathematics, modeling, and systems analysis.

ADDITIONAL

- Portfolio: <https://santiagoacostab17.github.io> with live project documentation:
- All projects version-controlled on GitHub with full README, methodology notes, and reproducible code.
