

Santiago Acosta

Data Analyst · SQL · Python · Power BI · A/B Testing · Statistical Analysis · BI Dashboards

Bogotá, Colombia · santiagoacostab17@gmail.com · [linkedin.com/in/santiagoacostab17](https://www.linkedin.com/in/santiagoacostab17) · santiagoacostab17.github.io

PROFILE

Data Analyst with a quantitative engineering background and hands-on experience building end-to-end analytics pipelines. I have identified a revenue concentration risk across \$13M in sales data, validated a statistical trading signal across 81K+ Forex observations, and located the highest-impact drop-off in a subscription checkout funnel — reducing friction at that step was the single largest revenue opportunity in the dataset. TripleTen certified. English B2.

TECHNICAL SKILLS

Data Analysis: SQL, Python, pandas, NumPy, Excel, EDA

Statistics: SciPy, statsmodels, A/B Testing, Confidence Intervals, Regression, Cohort Analysis

Business Intelligence: Power BI, DAX, Looker Studio, Tableau, Plotly

Data Modeling: MySQL, Star Schema, ETL Workflows, PostgreSQL, SQLAlchemy

Tools & Languages: Git, GitHub | Spanish (native), English B2

PORTFOLIO PROJECTS

Northwind Revenue Insights

MySQL · Power BI · Star Schema · DAX | santiagoacostab17.github.io

- Built a MySQL star schema from raw transactional data and Power BI dashboards with drill-through on revenue KPIs, product mix, and regional trends.
- Identified that 3 products drive ~64% of \$13M in total revenue — a critical concentration risk. Recommended a diversification strategy and a best-practices playbook modeled on top-performer behavior.

EURUSD Quantitative Pipeline

Python · pandas · NumPy · Time Series · Backtesting | santiagoacostab17.github.io

- Processed 81,938 1-minute EURUSD observations over 6 years; built a vectorized backtesting engine with confidence intervals, Kelly criterion sizing, and look-ahead bias correction.
- Confirmed a statistically significant positive bias in the signal. With 81K+ independent observations, even a marginal deviation from 50% is meaningful — noise at this sample size would produce a near-perfect 50/50 split. Concluded the pattern is a valid foundation for further research with session and volatility regime filters.

RappiPlus — End-to-End Business Analysis

Python · PostgreSQL · Power BI · SciPy · A/B Testing | santiagoacostab17.github.io

- Audited data quality, built a SQL conversion funnel, and ran monthly cohort retention analysis on a subscription product.
- Pinpointed the highest-impact funnel drop-off: Begin checkout to Add payment info loses 13% of users. Validated a checkout UI redesign via Z-test ($p < 0.05$). Flagged a tracking anomaly distorting upstream funnel metrics.

WORK EXPERIENCE

Customer Operations Associate

Teleperformance & Concentrix · 2023–2024

- English-language operations supporting US and international clients. Professional written and verbal communication. Process management and operational metrics tracking in high-volume environments.

EDUCATION & CERTIFICATIONS

Data Analyst Certification · TripleTen

Completed 2026 | Python, SQL, A/B Testing, Statistical Analysis, EDA, Data Visualization

Data Science Program · A2 Capacitación

In progress · 2026 | Machine learning, advanced statistics, Python modeling

Mechanical Engineering · Universidad de los Andes

2018–2022 | 7 semesters completed
