SUMMARY

Data Analyst with hands-on experience across the full analytics lifecycle: SQL data modeling, Python-based statistical analysis, A/B testing, and Power BI/DAX dashboards. Background in Mechanical Engineering, trained to think in systems and validate assumptions rigorously before drawing conclusions. Completed the TripleTen Data Analyst Bootcamp; currently advancing a Data Science program. Open to remote Data Analyst roles.

TECHNICAL SKILLS

- **Languages:** Python, SQL (MySQL, PostgreSQL), DAX
- **Python libraries:** pandas, NumPy, SciPy, statsmodels
- **Visualization & BI:** Power BI (data modeling, DAX measures, drill-through dashboards), Excel
- **Analytical methods:** A/B testing & hypothesis testing, cohort & funnel analysis, ETL pipelines, statistical inference, star-schema data modeling

PROJECTS

Northwind Revenue Insights | *BI · Star Schema · Retail & E-commerce Revenue Analysis*

- Designed a star-schema data model from scratch for a wholesale distributor and built three drill-through Power BI dashboards covering product margins, employee quota attainment, and category mix.
- Analyzed \$13.08M in H1 2006 revenue and identified that just 3 of 77 SKUs drove 64% of total revenue, surfacing a concentration risk with direct implications for procurement and pricing strategy.

RappiPlus: End-to-End Business Analysis | *TripleTen Capstone (Reviewed & Approved) · A/B Testing · Cohort Analysis · Power BI*

- Built a 7,796-user, 6-stage SQL conversion funnel for a subscription service, identifying a 13.3% critical drop-off at the payment entry stage.
- Designed and ran an A/B test on a checkout redesign; identified a sample-size imbalance between control and treatment groups mid-test and recalculated significance using a two-proportion Z-test ($p < 0.05$), flagging the limitation in the final report.
- Built monthly cohort retention models and two Power BI dashboards with DAX measures and drill-through filters. Final capstone reviewed and approved by TripleTen as an independent check on methodology.

Netflix User Behavior & Churn Analytics | *Customer Analytics · Churn Analysis · Power BI*

- Built a full raw-to-dashboard pipeline in Python, joining 6 source tables (210K+ raw records) into a single 8,499-user table with 31 engineered behavioral features.
- Designed a Power BI dashboard with custom DAX measures segmenting a 64.9% churn rate by plan, geography, and device; found churn was nearly flat across those dimensions and redirected the analysis toward behavioral signals (completion rate, session frequency, days since last activity), where the real separation between churned and retained users appeared.

EURUSD Quantitative Pipeline | *Quantitative Research · Python Simulation on Real Market Data*

- Built a custom vectorized backtesting engine in NumPy (no external strategy libraries) on 6 years of 1-minute OHLC forex data (81,938 observations), with look-ahead bias eliminated by architectural design.
- Validated a price-action strategy at a ~59% win rate using bootstrapped confidence intervals and Kelly-criterion position sizing; reported the result as a research finding, not a live-ready system.

EDUCATION & CERTIFICATIONS

Data Analyst Bootcamp — TripleTen — Python, SQL, Power BI, Statistics Completed

Data Science Program — A2 Capacitación In progress

Mechanical Engineering — Universidad de los Andes, Bogotá — 7 semesters completed 2018 - 2023
